

Information for teachers

Energy trail

This trail is designed to take pupils on a route through the exhibits in **Explore@Bristol** to investigate different forms of energy in the world around us.

The topics covered include the energy in the body, sound energy, heat energy, and lightning and electricity. It is designed for upper KS2 and lower KS3 students.

It is free to download and although in colour, works just as well when photocopied in black and white.

The trail takes approximately 45 minutes to complete but this time can vary depending on ability and how busy the exhibits are.

It is designed to be completed individually with sections that allow for group discussion.

The numbered sections do not need to be followed in order.
